

<b>Dept Number</b>	<b>CS 514</b>	<b>Course Title</b>	<b>Advanced Operating Systems</b>							
<b>Semester Hours</b>	<b>3</b>	<b>Course Coordinator</b>	<b>Bidyut Gupta</b>							
<b>Catalog Description</b>	Rigorous treatment of advanced topics in operating systems. Multiprocessor and distributed operating systems. Highly concurrent machines. Performance analysis of memory management and scheduling algorithms. Recovery techniques in distributed computation. Security in operating systems.									
<b>Textbooks</b>										
SP17										
No book Required										
<b>References</b>										
<b>Course Learning Outcomes</b>										
<ul style="list-style-type: none"> <li>• Performance analysis of different algorithms used to design various components of operating systems</li> <li>• To introduce more advanced concepts like distributed and network OS</li> <li>• To prepare the student for further specialized study in any specific area of operating systems</li> </ul>										
<b>Assessment of the Contribution to Program Outcomes</b>										
<b>Outcome →</b>	1	2	3	4	5	6	7	8	9	10
<b>Assessed →</b>		X	X	X	X		X			
<b>Prerequisites by Topic</b>										
CS 335 with a grade of C or better.										

Formatted: Centered

**Major Topics Covered in the Course**

1. Concurrent processes  
Mutual exclusion, synchronization
2. Processor scheduling  
Multiprocessor systems, tree-structured precedence graphs, list scheduling, preemptive and non-pre-emptive scheduling
3. Storage allocation in paging systems  
Optimal paging, working set, stack algorithms, extension problems
4. Distributed operating systems  
Mutual exclusion, deadlock
5. Case study Fault tolerance in distributed computing environment (including mobile computing environment)
6. Parallel compilers
7. Future directions of parallel and distributed computing systems
