Calling all technology student innovators

The ever-evolving field of technology is increasingly important across all of The Boeing Company’s operations—from commercial airplanes to defense and space. To tap into the next generation of IT leaders, Boeing sponsors the annual UpLift IT Case Competition—a technology-focused college case competition.

Teams of up to three students will work on a project from one of three categories:

- Contributing to the Eclipse Open System Engineering Environment
- Data Visualization
- Computer-Aided Technology Automation

We’re looking for enthusiastic college students from universities across the United States to compete in this year’s challenge. Students can apply their technical skills, think strategically and put their creativity to the test for a chance to win great prizes, including a job interview* for an IT internship or a full-time position at Boeing.

Projects will be reviewed by leading members of Boeing’s IT organization.

Deadline extended!
Registrations now being accepted through May 9, 2016.

Visit boeing.com/uplift for complete competition guidelines, including full category descriptions, and to register.
Please direct all competition questions to uplift@boeing.com.

Don’t wait to sign up—the sooner you register, the more time you will have to work on and perfect your project.

*Students must be a U.S. person to be considered for an interview.
